1	\44 .	The apparatus of claim 36, further comprising:
2	a feedl	back device means coupled to the electrode means responsive to a detected
3	characteris	tic of the external skin layer surface or the underlying tissue site.
1	45.	The apparatus of claim 42, further comprising:
2	a fluid	passage lumen means positioned in the membrane means to cool the surface of
3	the skin, th	e membrane receiving the electrolytic solution and transfer thermal energy from
4	the electrod	de means to the exterior skin surface and the underlying tissue site, and
5	a sourc	ce of electrolytic solution coupled to the fluid passage lumen means.
		1
1	46.	The apparatus of claim 42, wherein the electrode means is a RF electrode
2	coupled to	a RF power source, and the electrolytic solution transfers RF energy from the
3	RF electrod	de to the underlying tissue site.
1	47.	The apparatus of claim 45, wherein the feedback device means includes a
2	controller.	
1	48.	The apparatus of claim 45, wherein the feedback device means includes a
2	multiplexer.	

REMARKS

Applicant has added claims 36-48 to more particularly claim the invention.

CONCLUSION

Applicant requests entry of this Preliminary Amendment.

Paul Davis

Respectfully submitted,
